wijzijntop

+561.8% Organic Growth in Just 3 Months with AI SEO

wijzijntop Personeelsdiensten is a Dutch staffing agency specialized in production, industry, engineering, logistics, and finance roles. They connect blue-collar and technical talent with employers across the Netherlands.

wijzijntop Personeelsdiensten started with curiosity about AI-generated content. What they discovered was not just AI writing, but a complete automated SEO growth engine.

Within three months with WP SEO AI, that curiosity translated into measurable authority, scalable visibility, and a structural shift in traffic acquisition.

“We started working with WP SEO AI in October and we're very satisfied with the collaboration. The communication with Marloes has been excellent. She thinks along proactively and communicates clearly and directly. We were amazed to see ourselves ranking above major organizations like FNV. That's when we realized this approach really works!”

Case Study

Challenge - AI Curiosity but no strategy

wijzijntop Personeelsdiensten wanted to turn AI curiosity into real business impact. As a staffing agency operating in competitive sectors like construction, logistics, and engineering, they relied heavily on referrals and direct outreach. Organic visibility was limited, and the team had zero SEO experience.

They needed a scalable way to answer the exact questions job seekers search for, without building a full marketing department. The challenge: Create authority fast in a highly competitive employment market.

WP SEO AI's - Approach

WP SEO AI implemented a content-driven SEO strategy focused on topical authority in the Dutch staffing market. We published 40 blog articles monthly during the first three months.

Content clusters targeted awareness-stage searches such as CAO wage rates, temporary work regulations, salary expectations, and role comparisons within production, logistics, engineering, and construction.
The AI handled keyword research, content planning, internal linking, and optimization, enabling a team with zero SEO experience to scale organic growth rapidly and systematically.

WP SEO AI's - Impact

- Within 90 days, organic traffic increased by +561.8%, peaking at 1,092 clicks in January
- 980 of those clicks came directly from AI-generated content, meaning SEO AI drove ~90% of total organic traffic
- The strategy didn't just increase traffic but it shifted the entire acquisition model from referrals to scalable organic discovery
- wijzijntop even ranked above major organizations like FNV for competitive CAO-related searches, a strong authority signal
