WP SEO AI

Kinwell

From stretched internal SEO capacity to 51% of organic clicks driven by SEO AI in just 4 months

Kinwell, a Dutch ICT and communications partner for SMEs, wanted to strengthen its online visibility and generate more qualified leads across connectivity, telecom, security, and modern workplace solutions.

WP SEO AI developed an AI-first SEO strategy focused on highly specific, intent-driven search topics that reflect Kinwell's technical expertise and practical business support, helping companies easily find reliable ICT answers online.

In just four months, organic traffic grew to 1,250 clicks and over 269,000 impressions, with AI-generated content driving nearly half of all visits, giving Kinwell a scalable, independent digital presence.

Case Study

Challenge - No Capacity for SEO

Kinwell had strong domain authority and in-house SEO knowledge, but lacked the time and capacity to scale content consistently. Operating in a competitive B2B ICT market with low to mid search volumes, traditional SEO felt slow and unpredictable.

The team needed a scalable, data-driven way to grow visibility and leads without adding operational workload.

WP SEO AI's - Approach

WP SEO AI implemented an AI-first SEO strategy focused on scale, speed, and data validation. Content was produced continuously across highly specific ICT, telecom, and security topics, allowing Google to surface early winners quickly.

Underperforming content was deprioritized, while Kinwell only had to spend time optimizing high-performing pages. In parallel, AI visibility (LLM & Google AI Overviews) was tracked to capture next-generation search demand before competitors.

WP SEO AI's - Impact

- SEO AI traffic grew from near zero to over half of all organic clicks
- While homepage clicks stabilized, new AI-driven pages became the primary growth engine
- Visibility scaled rapidly: Impressions more than doubled in 4 months
- Early AI/LLM visibility was established before mass competition entered the space
