WP SEO AI

DGF Group

From zero blog output to growing AI-driven traffic across 4 websites

DGF Group BV, a specialist in industrial products and solutions, wanted to grow online visibility across its brands without adding extra work for its small team.

WP SEO AI created a multilingual SEO strategy across four websites (Graph shows Imperial Valve), producing technical content around topics like gas meters, control valves and turnkey solutions.

In just over a year, SEO AI clicks for Imperial Valve grew from 1 to 328 per month, while all four websites gained stronger rankings, increased visibility and more international B2B inquiries.

"I was skeptical at first. But after seeing the examples, I decided to try it. We wanted to blog regularly but we simply did not have the time. Now, traffic is growing, we are getting more international inquiries. The results speak for themselves. We renewed for a second year because the growth is clear."

Case Study

Challenge - Efficiency Gap

DGF Group BV is a fast-growing industrial company managing multiple specialized webshops. Kees Bakker, the company's sales & marketing director, knew that publishing technical blogs would help position his brands as authorities in the market and drive organic traffic.

But with a small team there was simply no time to write or manage content. The company had zero blog output, limited online visibility across its portfolio of websites, and no dedicated marketing resources to change that.

WP SEO AI's - Approach

WP SEO AI developed a multi-site, multilingual content strategy for all four DGF Group BV webshops in English and Dutch. For each brand, the AI identified relevant product categories, uncovered high-potential search topics, and built content clusters around core themes such as measurement instruments, industrial valves, manifolds, and turnkey process solutions.

Blog content is continuously published, monitored, and optimized to keep each site strong and authoritative. The process is highly automated and requires very little time from Kees or his team, aside from a quick review of content alerts for technical accuracy.

WP SEO AI's - Impact

- In the latest month, WP SEO AI content accounted for 68.3% of all organic clicks
- From 22 clicks in October to 328 in March, AI-driven traffic increased by +1,391% in five months.
- Growth was visible across all four websites, with stronger rankings, more visibilty and more international inquiries.
- First-page rankings accelerated month over month as more AI-generated content was indexed and rewarded by Google.
