Case Study

Challenge - No Sales DNA & Marketing Capacity

IMPLI-CIT had relied on word of mouth for 25 years and never structurally invested in SEO, resulting in a growth plateau and limited online visibility. As a team of IT engineers with no sales DNA, cold outreach was never an option. They wanted warm inbound leads without sacrificing their technical focus.

Without internal marketing capacity and with the team on-site with clients most days, producing consistent SEO content at scale was not feasible. IMPLI-CIT needed an efficient solution to build topical authority and create long term organic visibility without increasing internal workload.

WP SEO AI's - Approach

WP SEO AI rolled out a scalable, AI driven content strategy focused on high intent search queries within IMPLI-CIT's core topics: onsite IT support, datacenter services, and WiFi site surveys. Publishing ~20 SEO/GEO optimized blogs per month in English, each article was built using AI powered topic research and optimization to answer real user questions, build topical authority, and align with AI driven search behavior.

This enabled IMPLI-CIT to grow organic visibility at scale and attract international IT service providers without an in house marketing team or a single sales call.
