

Aexus

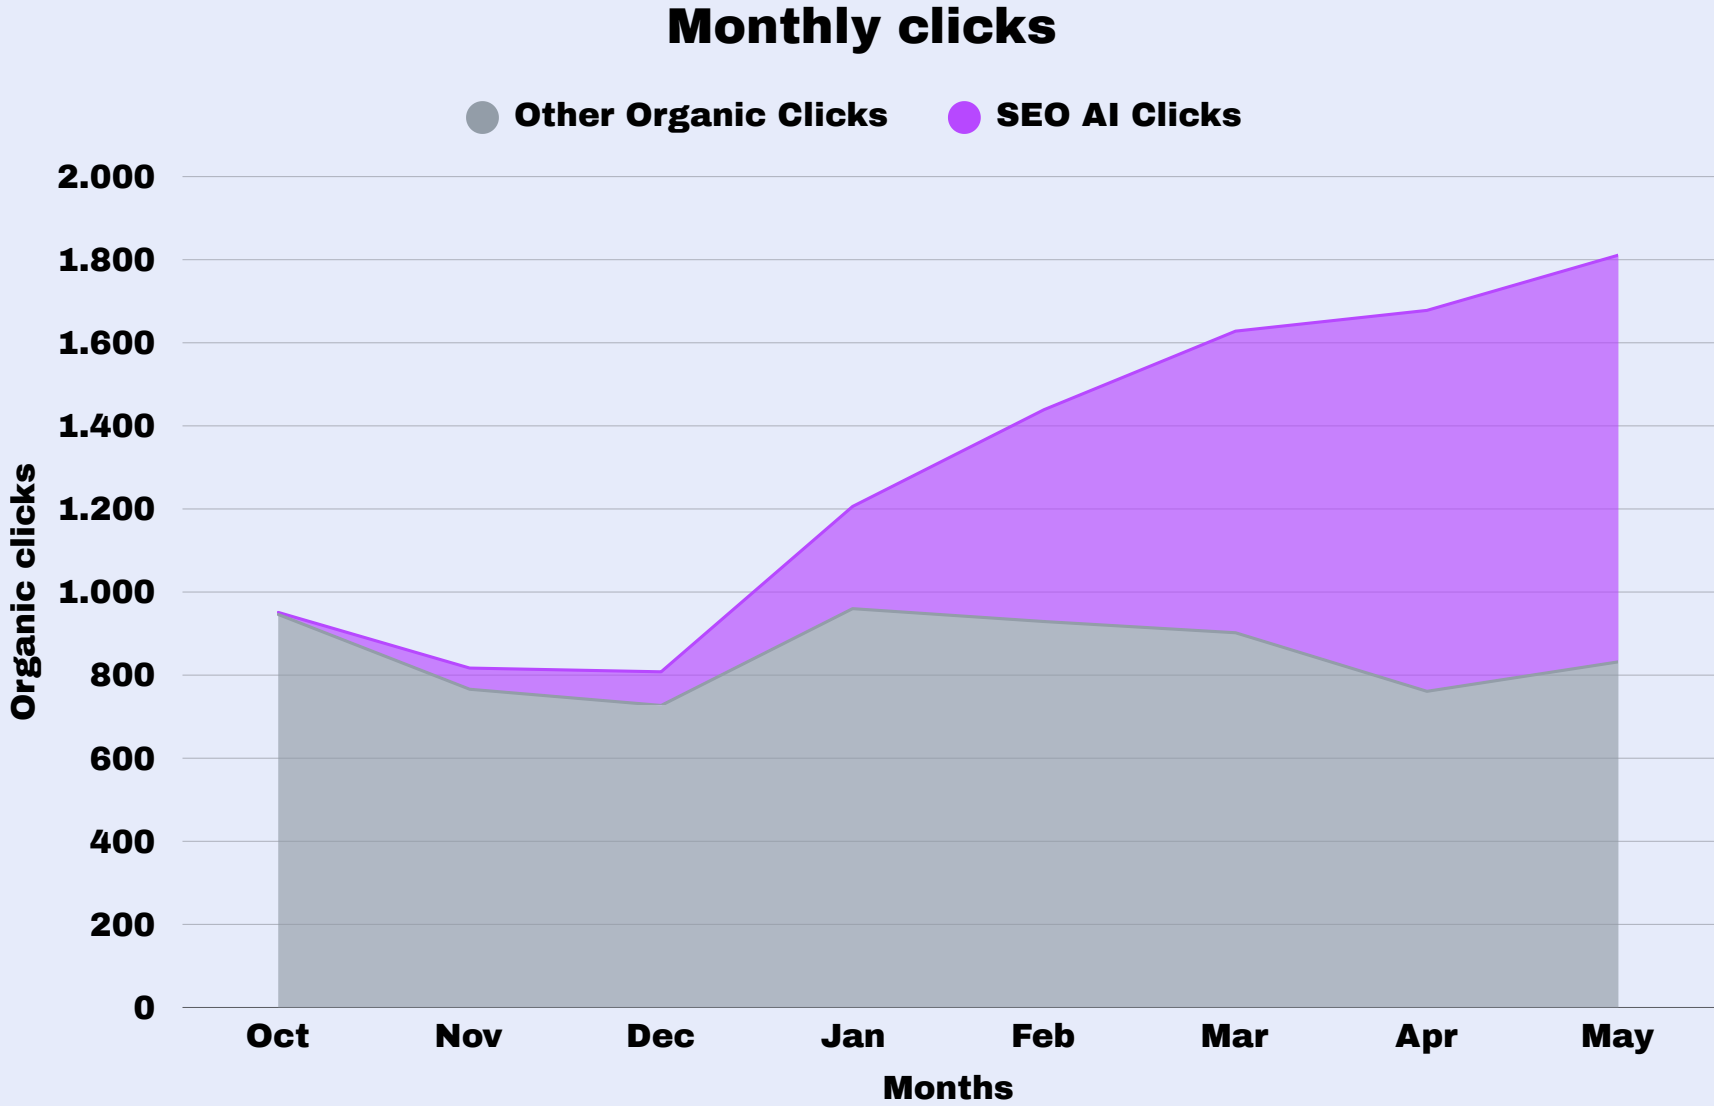

979 WP SEO AI Clicks
Per Month in Just 8
Months

Aexus, an international sales outsourcing and business development company for technology firms, wanted to improve organic visibility and domain authority but lacked the internal capacity to consistently produce high-quality content at scale.

WP SEO AI implemented an automated SEO content strategy that steadily increased rankings, visibility, and inbound reach across key commercial topics.

Within 9 months, WP SEO AI generated 4,260 organic clicks, accounted for 60.5% of total organic traffic, and supported a growing number of inbound opportunities.

"We see a steady increase in inbound traffic from the articles WP SEO AI helps generate. The process has been smooth, requires very little effort from our team, and creates a consistent upward trend in visibility and opportunities."

Floris Koppejan, Commercial Leadership Team at Aexus

Case Study

Challenge - Efficiency Gap

Aexus wanted to strengthen its organic visibility and build a scalable inbound marketing engine that could support international growth. While the company had a strong commercial team, consistently producing high-quality SEO content internally was difficult and resource-intensive.

The marketing team wanted to explore AI-driven content creation without sacrificing quality or strategic relevance. They needed a repeatable process capable of increasing visibility, authority, and inbound opportunities without increasing workload.

WP SEO AI's - Approach

WP SEO AI implemented a scalable content-driven SEO strategy focused on building authority across sales outsourcing, market expansion, lead generation, and business development topics.

Initially, the strategy targeted broad industry topics to strengthen domain authority and increase topical relevance. As data accumulated, content production shifted toward higher-intent commercial topics aimed at decision-makers and buyers. Using AI-powered automation, WP SEO AI continuously researched, generated, optimized, and published content at scale. This enabled Aexus to publish 175 SEO articles while requiring minimal internal resources.

WP SEO AI's - Impact

The number of Top 10 rankings grew from 1,325 to 6,034 keywords (+355%).

466,048 monthly impressions at peak performance

+118% growth in total ranking keywords

AI-generated content helped build the company's topical authority and helped with a growing number of inbound opportunities.

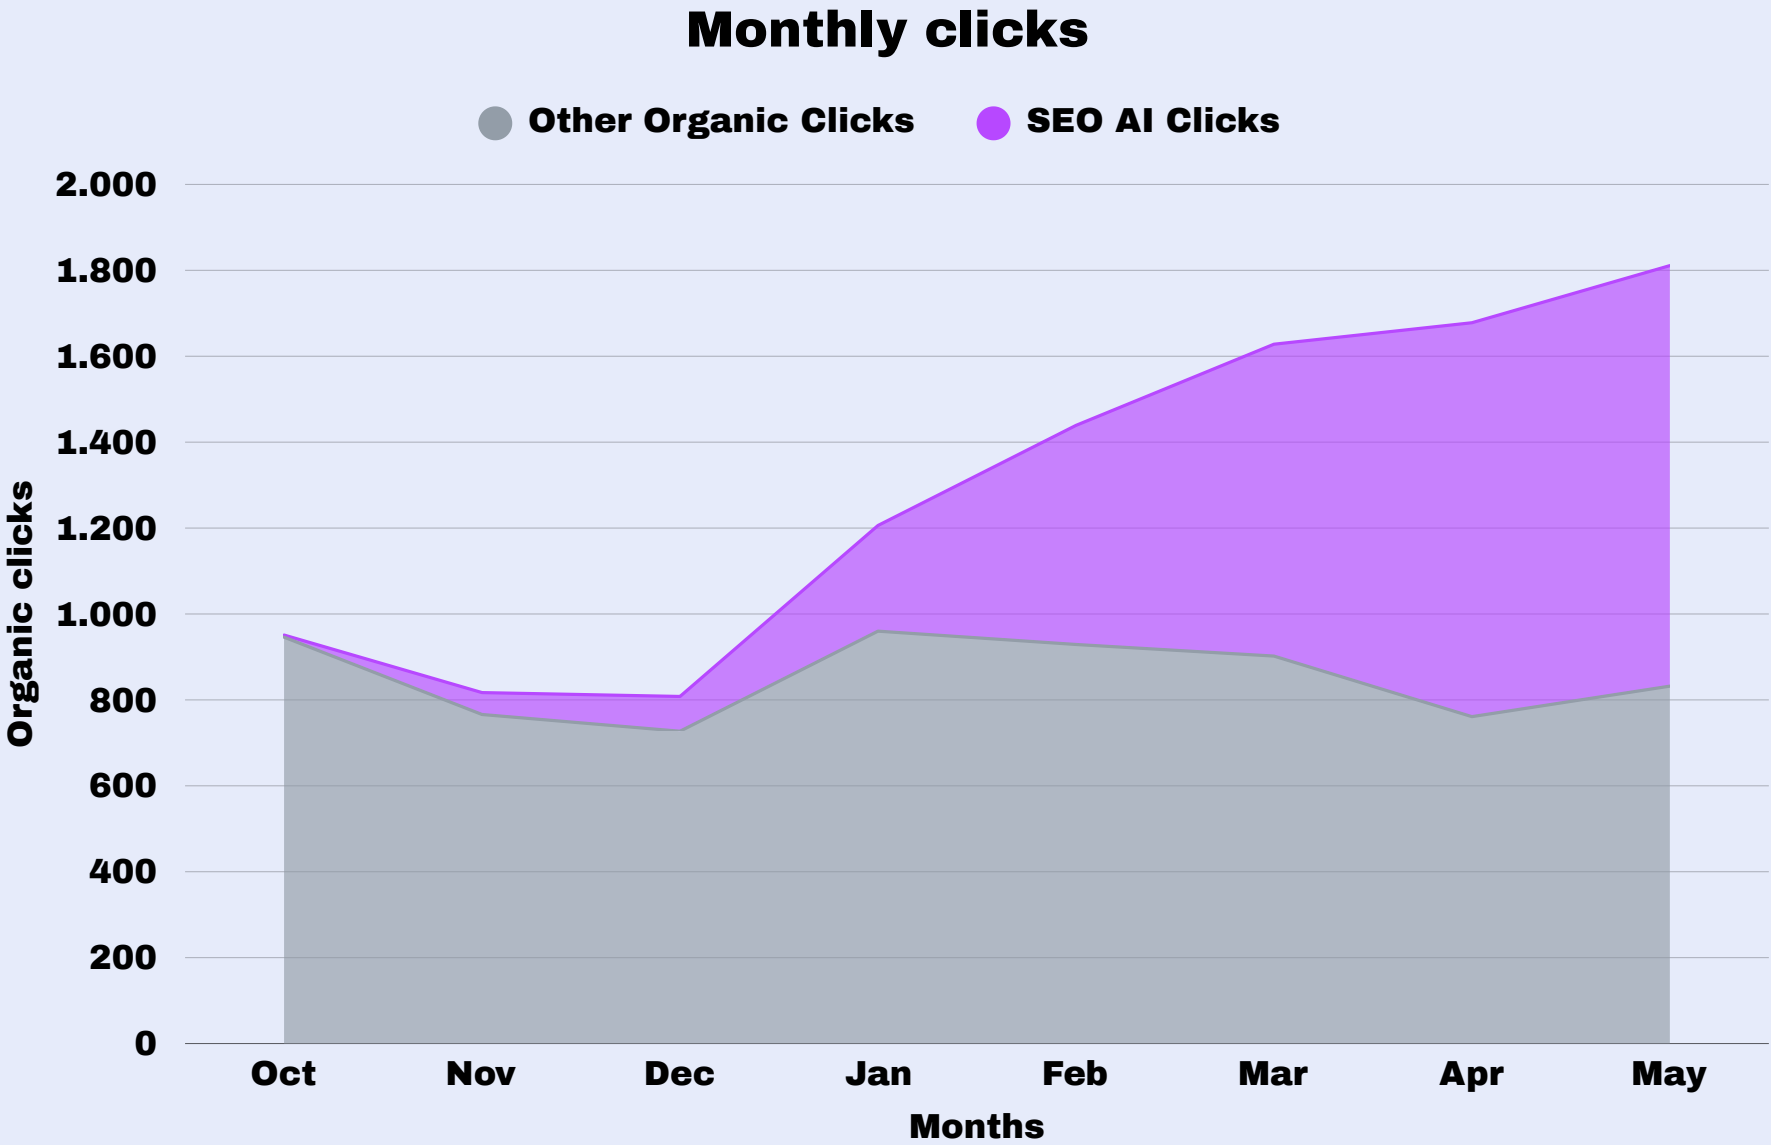

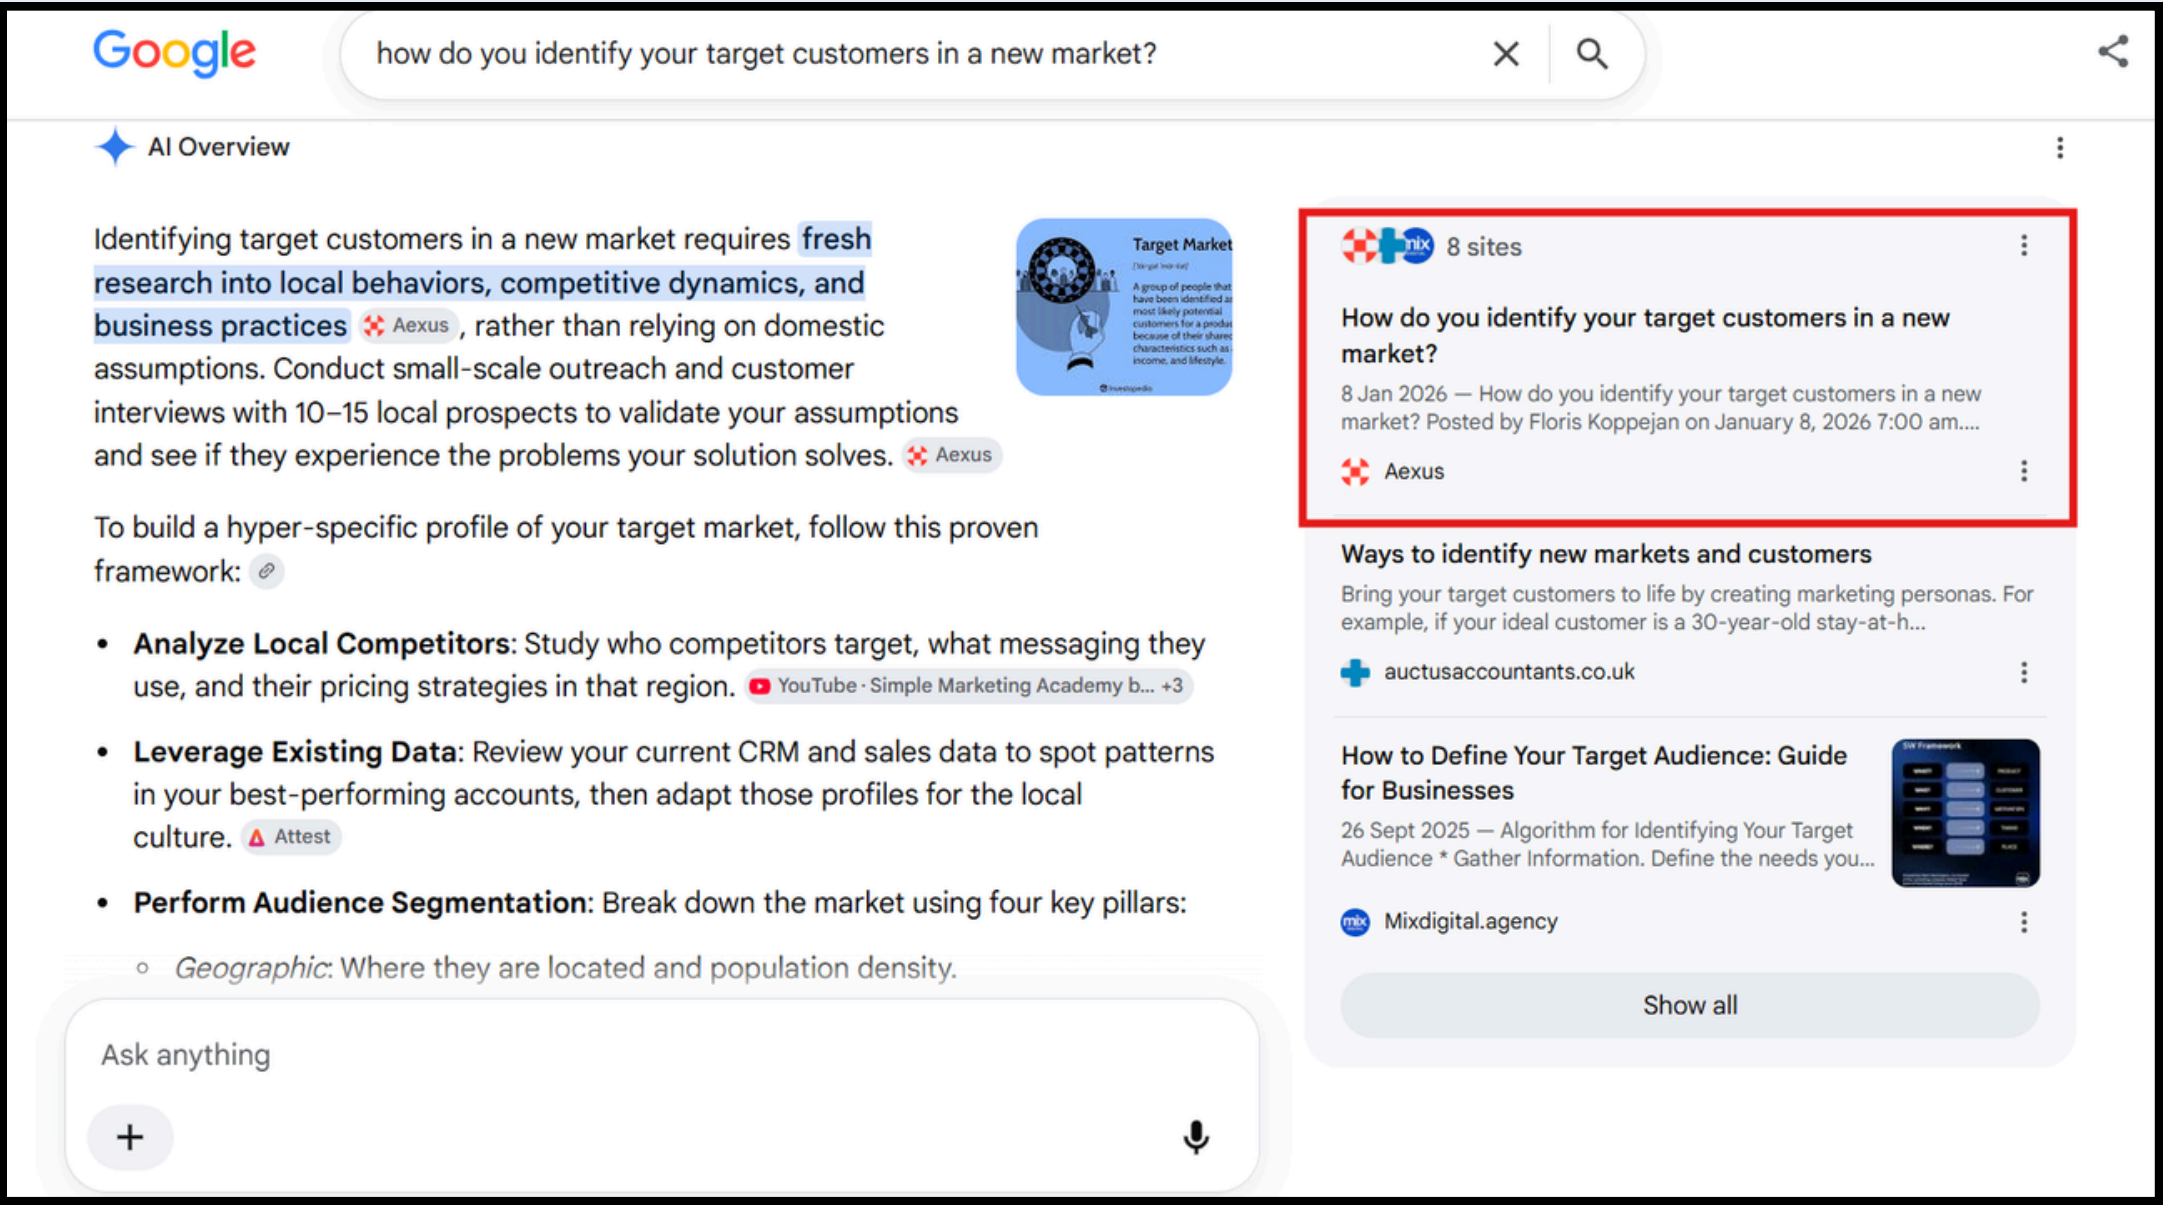

AI Content Became Aexus' Largest Organic Traffic Source in Less Than a Year

175 Articles published

+4260 Clicks in 8 Months

60,5% Traffic share from SEO AI content
