WP SEO AI

ProfOrg

From no SEO strategy to 4,389 monthly clicks

ProfOrg, an established Germany-based provider of corporate immigration and global mobility services, wanted to build online visibility from scratch instead of relying on inconsistent marketing.

WP SEO AI developed a scalable SEO strategy around high-intent search topics, helping ProfOrg build authority in both traditional search and AI-driven results.

In just six months, organic traffic grew from around 200 to 4,389 monthly clicks, giving ProfOrg a strong foundation for long-term growth.

"The combination of AI-based technology and great people is what makes the difference here. At no point do you feel like software is just being 'handed to you' that you have to figure out on your own. Instead, WP SEO is always reachable, thinks along with you, and creates real added value."

Remco Rehberg, Managing Director at ProfOrg

Case Study

Challenge - Generative Search First Movers

ProfOrg faced limited organic website traffic. After a comprehensive rebranding, the priority became identifying a focused and sustainable content strategy with measurable results, taking a more deliberate approach beyond traditional SEO.

At the same time, ProfOrg recognized that AI search engines were becoming increasingly important. However, the time and resources needed to build and execute a scalable SEO strategy were simply not available.

WP SEO AI's - Approach

We implemented a scalable, AI-driven content strategy with a focus on Generative Engine Optimization (GEO). Targeted blog articles and topic clusters around Global Mobility and Corporate Relocation were created. The focus was on authority building and the strategic coverage of "People Also Ask" queries.

Using WP SEO AI, ProfOrg was able to publish a large volume of high-quality, SEO-optimized content in a short period of time — without any additional internal effort. The automation enabled rapid scaling, consistent quality, and data-driven optimization of content.

WP SEO AI's - Impact

- 94.8% of all traffic in March was generated by SEO AI
- +176% growth from second to third month of collaboration
- Organic traffic built from 200 to 4,389 monthly clicks within 6 months
- Significant increase in visibility across both AI search systems and traditional search engines
