

Dutch on Track

From near-zero visibility to +1,706% organic growth

Dutch on Track is a certified Dutch language school for expats in Eindhoven, Tilburg and Helmond, helping English-speaking professionals integrate into Dutch society.

WP SEO AI built an audience-first content strategy targeting expat life topics: From citizenship processes to cultural norms, creating a natural funnel toward the school's course offering, fully published in English.

In 8 months, total monthly clicks grew from 48 to 867 (+1706%), with 91.4% of all July clicks driven by WP SEO AI content, giving Dutch on Track a measurable first-mover advantage in generative search.

“We started from scratch with SEO. It's amazing how fast WP SEO AI got our website relevant, both in regular search and now in Google AI answers and ChatGPT. What I liked about working together was the flexibility: they really thought along with us and adjusted the approach to get us actual results.”

Lisa Broos, Project Coordinator at Dutch on Track

## Case Study

### Challenge - AI Curiosity

Dutch on Track wanted to grow its organic presence and attract more English-speaking internationals searching for integration support in the Netherlands. With a small team fully focused on delivering lessons, SEO was consistently deprioritised. The school had no significantly ranking content and was almost invisible in search for the queries their ideal audience was actually asking.

Dutch on Track also saw an early-mover opportunity: the rise of AI-generated search results was changing how people discover services, and they wanted to get ahead of competitors before it was too late.

### WP SEO AI's - Approach

WP SEO AI built a content strategy anchored around the pain points of English-speaking expats navigating life in the Netherlands, covering topics like income requirements, cultural norms, citizenship processes, and daily life questions.

This audience-first approach gave Dutch on Track the topical authority needed to rank for high-volume informational queries, while creating a natural funnel toward their course offering. All content was published in English to match the audience's language.

Over 7 months, WP SEO AI published 138 articles across tightly focused content clusters, entirely managed without adding headcount.

## WP SEO AI's - Impact

-  WP SEO AI content created a scalable growth channel for Dutch on Track, driving 792 monthly SEO AI clicks by July.
-  They built strong topical authority in the expat-life niche, with 2,700+ keywords now ranking, the majority in positions 1–10.
-  Total monthly clicks grew 215% in just three months once AI-optimised content hit critical mass, from 101 clicks in April to 318 in June.
-  Marketing has become efficient and measurable, giving Dutch on Track a strong digital presence, visible not just in classic search, but across Google AI Mode, Google AIO, and ChatGPT.
